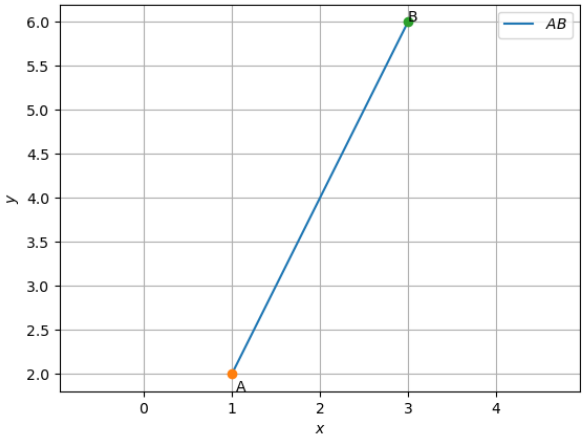

Fig. 0: line formed with points(1,2) and (3,6) using Python

1 Question No.Matrices 1.76.1

Question : Find equation of line joining (1,2) and (3,6) using determinants.

2 Solution

To construct a line joining $\mathbf{A} = \begin{pmatrix}1\\2\end{pmatrix}$ and $\mathbf{B} = \begin{pmatrix}3\\6\end{pmatrix}$ consider a point C= $\begin{pmatrix}x\\y\end{pmatrix}$ in vectorform and $\mathbf{n}$ be the normal vector Then

$$\mathrm{n}^T \times \mathbf{A} = 1$$
$$\mathrm{n}^T \times \mathbf{B} = 1$$
$$\mathrm{n}^T \times \mathbf{C} = 1$$

augmented vector is

$$\begin{pmatrix}1 & 1 & 1\\ 1 & 3 & x\\ 2 & 6 & y\end{pmatrix}$$

Area Of $\Delta ABC using determinant$ $\det(\Delta ABC)$ =

$$\frac{1}{2} \times \begin{vmatrix}1 & 1 & 1\\ 1 & 3 & x\\ 2 & 6 & y\end{vmatrix} = 0$$

Since A,B,C lie on same line

$$1\begin{vmatrix}3 & x\\ 6 & y\end{vmatrix} - 1\begin{vmatrix}1 & x\\ 2 & y\end{vmatrix} + 1\begin{vmatrix}1 & 3\\ 2 & 6\end{vmatrix} = 0$$

$$1 \times (3y - 6x) - 1 \times (y - 2x) + 1 \times (6 - 6) = 0$$
$$3y-6x-y+2x=0$$
$$2x-y=0 \text{ or } y-2x=0$$
$$\begin{pmatrix}2 & -1\end{pmatrix}\mathrm{x} = 0 \text{ or } \begin{pmatrix}-2 & 1\end{pmatrix}\mathrm{x} = 0$$
